This photo was taken in Lapland, a very Northern part in Finland. I visited the most northward zoo in the world in Rovaniemi where was very near to the Arctic Circle. Later I had my first husky ride which was very exciting and new for me. If I did not go for exchange and I would not have the chance to visit the place like this.

CHENG, Chin Fai Haara

CHAN, Shuk Kwan Cathy

Participating in an Exchange Programme can certainly widen your horizon and enrich your life. You can always experience new things and challenges that may not occur in Hong Kong!

A valuable
experience having a
white Christmas in
the other side of
the world. Outdoor
skating is awesome!!!

KWOK, Pui Pui Alice

KWAN, Kir Yuen Betty

This is a meaningful day for all tekkari (students studying technology) to celebrate Wappu together!

It's the annual snow festival of Montreal. We had so much fun to play with snow!

TANG, Si Yu

LAM, Pui Yin Beatrix

Outbound exchange programme provided me with a golden opportunity to experience the "SILENCE", a luxury in Hong Kong. Simply looking at a silent lake, feeling the wind on the skin may even broaden my horizons!

YAU, Ho Sig Ivan

During the exchange program, I can really experience what it is like to be independent.

Overcoming the uncertainties has taken for granted.

All men are brothers. I have met a lot of new friends during the program. It is an incredible experience for me!

YU, Pui Shing H.

This exchange experience has changed my life perspective upside down, I can't be more grateful for this precious opportunity. It is definitely worthwhile striving for.

With Kohala Watershed Partnership, we planted native trees (*Acacia koaia*) in the Kohala Mountains in order to re-establish the forest so that the biodiversity will get higher again. This watershed used to be a forest, before the practice of ranching in the neighborhood. The greenery grassland, at the first sight, might look beautiful and attractive, but in fact it's a kind of desert with only a few dominant invasive species. Forests play most significant role in ecological functioning and hydrological cycle. We were from different parts of the world, who gathered at this specific spot on this island in the vast Pacific Ocean with the same hope; to see the forests again.
