Teaching and Learning Architectural History with Google Earth

Project Number: 6000427

Principal Investigator: Dr Carmen Chung Man TSUI

Grant Type: TSG

Abstract:

In this project, the project team plans to use an interactive medium, Google Earth, to arouse students' interest in the history of architecture and urbanism. Google Earth is a digital geographic tool not unfamiliar to students. In recent years, many educators started to use Google Earth in the classroom. The software allows teachers to design creative ways to present course information. It can display data, maps, historical events, visually alongside lecture notes.
