Promoting inter-disciplinary learning and research between Psychology students and students from other disciplines

Project Number: 6000506

Principal Investigator: Dr Andus Wing Kuen WONG

Grant Type: TSG

Abstract:

Psychology is all about human mind and behavior. So in principle cross talks are possible between Psychology

and any other discipline that involves human activities. As the recent trend of higher education around the world encourages an inter-disciplinary approach in teaching, learning, and research, the present project is therefore proposed to promote inter-disciplinary learning and discovery among our students, particularly those majoring in Psychology. This project aims to create a platform for inter-disciplinary learning and research by teaming up our Psychology major students with students from other disciplines to go through a series of out-of-class, lab-based and discovery-oriented activities.
