

睡蓮 (Water-Lily)

Nymphaea tetragona

常綠水生植物，一般生長在淡水水體之中。其根部抓穩在水底泥土，根莖長出延生至水面的葉片並浮在水面。葉片有缺口由葉緣延至近葉柄。夏季會盛開色彩鮮艷的花朵，睡蓮花色多，較常見有白、粉紅及紫色，而其花朵有晝開夜閉的特性。

Water-Lily is an evergreen aquatic plant which lives in freshwater environment. Its roots anchor in soil underneath water and the rhizome produces leaves protruding out of water surface and floating. There is a long notch extending from the leaf margin to the petiole. It usually bears colourful flowers during summer, and white, pink and purple flowers are very common. Its flowers open and close diurnally.

名稱 Common Name	睡蓮 Water-Lily
品種名稱 Botanical Name	<i>Nymphaea tetragona</i>
科 Family	睡蓮科 Nymphaeaceae
花期 Flowering Period	五月至八月 May to August
果期 Fruiting Period	八月至十月 August to October
校園分佈位置 Where to find in CityU	中國花園 Chinese Garden
