

Hydrodynamics of Liquid Crystals

LIN FANGHUA

New York University, USA

Email: linf@cims.nyu.edu

In recent years, there is a re-surg-ing interests of study the hydrodynamics of liquid crystals. In this lecture we shall describe a few examples of recent advances in understanding these rather fascinating and complex dynamics. One of the aims of this little survey is to explaining both mathematical relevance & challenges and its applications in studies of some important non-linear equations.
